RELEVANT PROFESSIONAL EXPERIENCE

JAVA DEVELOPER (Full time)

Venuiti Healthcare

Waterloo, ON

February 2026 - Present

- Fixed critical authentication flaw allowing first-time users to bypass mandatory password reset by correcting Spring Security flow and validation logic
- Implemented runtime multi-tenancy proxy switching (with/without authentication) enabling zero-downtime configuration changes and improved tenant flexibility
- Enhanced integration testing by introducing TestContainers to simulate production dependencies, increasing reliability of Cucumber-based test suites

SOFTWARE ENGINEER & SCRUM MASTER (Full time)

PointClickCare

Remote

October 2020 - October 2025

- Designed and owned features contributing to a central identity and access management application for all PointClickCare products
- Wrote web features using Vue with JavaScript, and tested with Jest and Cypress, ensuring a high degree of confidence and quality in deployed features
- Wrote backend features using Java 11 with Spring, with tests written in Kotlin using JUnit and Rest Assured, achieving fully integration tested customer specifications
- Created and managed Azure cloud infrastructure, including app gateways, WAFs, eventhubs, DBs, keyvaults, and more, using Terraform
- Served scheduled week-long on-call shifts to support application p99 <= 0.5s for read and p99 <= 0.7s for write
- Served as scrum master alongside daily duties for a team of 10+ engineers, streamlining agile processes, reducing meeting time by 25%-75%, and facilitating the creation of clear, detailed stories

FULLSTACK DEVELOPER (Contract)

NorthOne Business Banking

Toronto, ON

March 2020 - September 2020

- Wrote web and backend features with TypeScript and React
- Created, designed, and implemented GraphQL schemas for managing user information per data contracts and requirements
- Designed and created entire microservices facilitating brand new, in-demand features using the AWS Lambda Architecture

BACKEND DEVELOPER (Contract)

RBC

Toronto, ON

Jan 2018 - Jan 2020

- Wrote Java applications for implementing regulatory measures on big data using Apache Spark, Spring, and REST APIs
- Development was undertaken in an Agile team of four, with a stress on well tested code, and continuous integration
- Created automatic deployment pipelines using Jenkins and IBM Urban Code Deploy onto Linux Cloud environments
- Wrote myriad bash scripts for application lifecycle management
